DENTSPLY Midwest

Handpiece maintenance

The **Midwest® Automate™** 4-port automated handpiece maintenance system offers accurate and consistent cleaning, lubricating and expelling, plus provides ease of use and flexibility for use with a wide range of handpieces. Its all-steel construction is said to offer durability for a longer life, while a dedicated chuck cleaning port cleans and lubes the handpiece chucking mechanism for simpler insertion and extraction of cutting instruments. Additionally, a handpiece count sensor allows users to run one handpiece while in a hurry, and still get a precise and consistent clean and lube cycle.

Universal adhesive

Futurabond® U dual-core adhesive is formulated to offer universal indications for all adhesive products without the need for additional activators or primers, plus it can block solvent evaporation. The versatile adhesive can be used in self-selective or total-etch mode on nearly all substrates, and it achieves total-etch bond strength levels using all light, self and dual cure resin-based components. Additionally, it cures without light activation, offering advantages toward endodontic applications like post cementation. It is available in a patent unit dose delivery system that stops the solvent from evaporating and does not require refrigeration.

SOREDEX

Pan imaging system

The versatile **SCANORA® 3Dx** panoramic imaging system is designed to produce detailed, high resolution, localized images for endo or periodontics, or full skull images for orthodontics and OMS orthognathic surgery. With the **Autoswitch™** feature, clinicians can easily change from high-definition panoramic to CBCT without needing to reposition the patient or change detectors, while 8 selectable fields of view limit radiation exposure to precise areas of interest. The system's fast scan and reconstruction times are said to produce an easier, more efficient workflow. Additional features include the **ClearTouch™** 12" touchscreen, a **RealPAN™** dedicated HD sensor for panoramic imaging, as well as **SOREDEX's** SARA and SMAR technologies.

Flowable composites

Constic self-adhesive flowable composites are engineered for multiple clinical procedures, offering etching, bonding and filling in a single step. The 3-in-1 flowable composite saves clinicians treatment steps and reduces the risk of error. Also, it is said to provide one of the strongest bonds to tooth structure. The flowable is available in six popular shades: A1, A2, A3, A3.5, B1 and Opaque White.

Our advertising policy

DPR makes every effort commensurate with professional editorial and advertising standards to report manufacturer's product news accurately, but cannot assume responsibility for the validity of product claims. It is necessary for the editorial staff to remove itself from policing the content or images used in various ads or marketing campaigns. Any reader with a complaint should contact the manufacturer directly.

Our editorial process

The dental profession and the publications that cover it have no shortage of dental professionals ready to share their expertise. DPR sets itself apart with an editorial team comprised of journalists, not dentists. Each month, we reach out to a wide variety of voices to help tell the story of innovation in the dental profession. We don't assume we know all the answers; we are, instead, committed to asking the right questions and delivering unbiased, quality content. None of the articles you read are "paid for," but as a product-centric magazine, working closely with our manufacturing partners is an important part of the process.
