Midwest Automate

BOOTH
1404

Eliminating potentially damaging guesswork, automated systems reduce the variability of manual handpiece maintenance. They deliver precise preset amounts of lubricant, accurate expel times, and constant air pressure. Automated systems also shorten processing time (compared to manual methods), increasing practice efficiency and freeing up staff for other activities in the practice.

The Midwest Automate system offers a wide range of features, not the least of which is access to Midwest's nationwide support and repair services. Carrying a 3-year warranty, the Midwest Automate system incorporates durable all-steel construction for long life. Providing simple operation, the intuitive easy-access keypad includes indicators for power, aerosol spray can status, number of activated ports, along with start buttons for both general processing and chuck maintenance.

With its extensive line of adapters and maintenance couplers, the Midwest Automate system accommodates a wide range of air-turbine handpieces from several manufacturers (Midwest of course, as well as KaVo, W&H, Sirona, Bien Air, StarDental, and NSK).
